

Ready to **Take Control** of Your EV Charging Network?

Imagine the freedom of an EV infrastructure that adapts to your vision — not the other way around. Let's discuss how JIBE Mobility can deliver the freedom, flexibility, and control your organization needs.

Let's Talk Integration

The ChargeBroker Advantage: Built for **Freedom, Flexibility & Control**

Freedom to Choose and Change

Hardware & Software Independence

ChargeBroker liberates you from rigid ecosystems—choose and switch charge point models or CPMS platforms as your business grows. Mix and match providers as needed.

Seamless Migration

Replace charging components without disruption. Transition at your pace—charger by charger, site by site, or all at once—and reconsider your tech choices anytime.

Flexibility to Innovate and Scale

Architectural Agility

Integrate new tech, onboard services, and segment your network—all from a single cloud-based gateway.

Lead, Don't Follow

Test and deploy smart charging or third-party services with minimal disruption. You can now lead innovation rather than following CPMS roadmaps dictated by others.

Control Over Your Network & Data

Centralized Management

Take command of your EV network with real-time visibility from one vendor-agnostic interface.

Data You Own and Use

Send charging data to your analytics for reporting, compliance, or action. Your network. Your data.

Business Autonomy

ChargeBroker ensures you own your data, make informed decisions, and respond rapidly to market demands—putting you firmly in the driver's seat of your e-mobility future.

J I B E MOBILITY

CHARGEBROKER
Unmatched Freedom, Flexibility,
& Control in EV Charging

FREEDOM

Mix and match hardware & software based on performance, not restrictions.

FLEXIBILITY

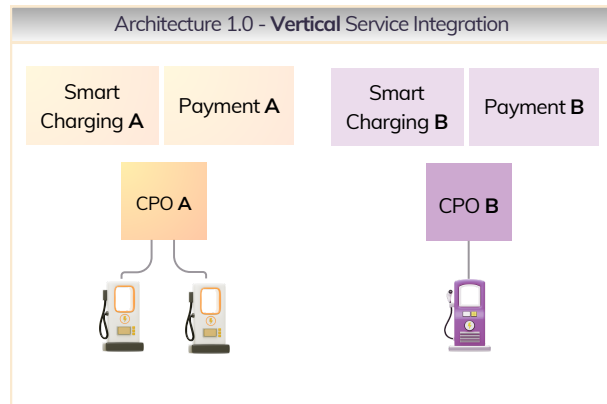

Adapt quickly to new standards, opportunities & evolving business needs.

CONTROL

Take full command of your charging network with centralized management

Are You **Trapped** by Your Charge Point Management System?

Traditional EV charging systems feel like an airport with no control tower. Each charger is isolated, locked into its own backend—trapping your network in a maze of inefficiency and limiting your business potential.

Typical **pain** points include:

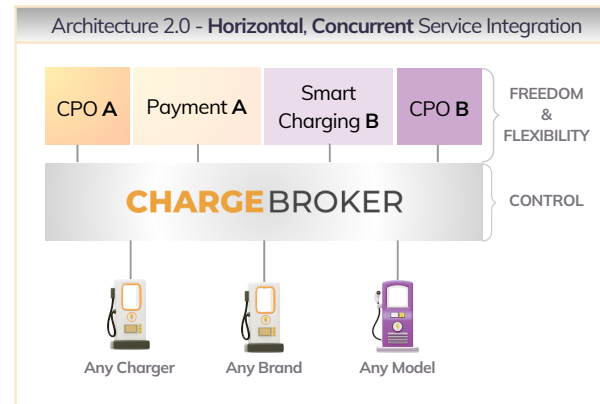

- No Freedom**
Tied to one vendor's hardware, software, and roadmap.
- Rigid Setup**
Infrastructure can't evolve with your business.
- No Central Control**
Scattered tools, no unified view, no real-time data to act on.
- Costly to Switch**
Disruption, delays, and expensive migrations.

Industry Pain Point

"Many charging network operators find themselves trapped in closed ecosystems that limit their business flexibility and technical growth—unable to lead innovation in their own market."

JIBE Mobility's ChargeBroker: Your Gateway to **Freedom**

Like air traffic control for EV charging networks, ChargeBroker becomes the smart layer in the middle—decoupling charge points from CSMS platforms with an intelligent OCPP broker that puts you back in control.

How ChargeBroker **empowers** you:

- Freedom to Choose**
Connect any charger or platform—on your terms.
- Flexible by Design**
Adapt hardware, software & services as your needs shift.
- Centralized Management**
Real-time network monitoring with data you control & use.
- Seamless Migration**
Change vendors without downtime or rework.

True Liberation

"ChargeBroker gives you the freedom to choose, the flexibility to adapt, and the control to lead in the fast-changing world of EV charging."

Tailored Solutions for Key Stakeholders

JIBE ChargeBroker empowers a diverse range of stakeholders to take control of their EV charging networks. Explore how different sectors benefit from its flexibility, interoperability, and centralized management:

Local Governments

Standardize your EV infrastructure while maintaining full control over vendor selection and development priorities.

Fleet Owners

Manage your entire EV fleet through a single unified interface—regardless of charger brand or location.

Commercial Charge Point Operators

Build your unique business model without CPMS restrictions. Mix and match hardware that meets your specific needs.

Grid Operators

Access critical data across charging networks for grid optimization and demand management.

Technology Integrators

Deploy and maintain complex, multi-vendor charging ecosystems with streamlined operations and full interoperability.

Charger Manufacturers

Accelerate market adoption by ensuring seamless compatibility with any backend. Enable your clients to unlock full functionality without being tied to a specific platform.

The intelligent architectural layer for EV charging networks:

"When your infrastructure stops holding you back, you stop managing complexity—and start leading transformation. ChargeBroker gives every player in e-mobility the power to act with purpose, not limits."
